

RUST CONVERTER

K149

HALTS EXISTING RUST AND PREVENTS FUTURE CORROSION WITH A DURABLE PROTECTIVE BARRIER

NO NEED FOR SAND BLASTING, GRINDING, OR SCRAPING

DESCRIPTION

This surface conditioner and primer changes rust into a dark protective polymer coating. It chemically converts existing rust into a inert coating that seals out moisture to prevent future rusting. The black polymer coating withstands exposure to weather, sun, water, and salt spray without peeling or cracking - even without painting! Kayline Rust Converter is an excellent primer for any type of paint. Protect iron and steel surfaces quickly and easily with chemical rust conversion.

FORMULATION

Water based solution containing penetrant agents, reactive rust converter, and polymeric barrier coating. Ready-to-use solution is non-flammable, and contains no lead or phosphoric acid.

HIGHLIGHTS

This revolutionary new product chemically neutralizes rust! After proper treatment with KAYLINE RUST CONVERTER, existing rust is transformed into an inert barrier coating that protects against further corrosion and oxidation of iron steel surfaces. This product actually uses the converted rust to form a barrier coating - no need to scrape or sandblast off the existing rust. It does so much more than ordinary acid surface treatments. While other treatments can only prepare a clean surface for priming - new KAYLINE RUST CONVERTER transforms a rusty, scaly surface into a smooth, inert, paintable surface all in one easy step.

YOU CAN SEE IT WORK

Within minutes of application, the old red rust will start to darken as it is chemically changed. When completed, the entire surface will have a smooth, even brown coating.

This advanced formula deposits a durable polymeric barrier coating that resists rain, sun, salt, and chemicals. It is so effective that painting over is not even required. For jobs that require painting, KAYLINE RUST CONVERTER is an excellent base coat - no need for any other primer. The water based formula is easy and safe to work with, requires no special application equipment, and cleans up easily with water.

APPLICATION

KAYLINE RUST CONVERTER does not require lengthy surface preparation. Simply remove all large or loose particles with a hammer or wire brush, and clean off any grease, dirt and salt. Apply KAYLINE RUST CONVERTER with a brush, roller, sprayer or by dipping. Use water for thinning and for clean up. KAYLINE RUST CONVERTER dries to a tack-free finish in 15 to 20 minutes. For optimum performance, a second coat is recommended. Allow 24 hours between coats. Coverage is 500 square feet per gallon.
